MySQL

Node.js

JavaScript

◦ HOBBIES ◦

I enjoy doing freelance as I always want to work on something involving programming, but when im not programming I enjoy the piano and going to meet friends and family.

• ABOUT ME

A Passionate Full-Stack developer with weighty amount of experience collaborating with like minded developers and working with applications that have been built from the ground up and implemented with databases and programming languages. Highly motivated to work and to take on projects. Designed and programmed three projects with programmers that were implemented with technologies that employers and companies are looking for.

- Currently looking to be in a position that I can use my skills to advance my love for programming and develop outstanding projects that can push and advance technology as a whole.

• EDUCATION

Certification in Web Development, University of Miami, Miami

December 2021 — June 2022

This was a 24 week rigorous course provided by the University of Miami that gave you the tools to become certified in Web Development. While at this program I was taught how to think like a developer and was provided teachings from experienced teachers.

- Languages taught : HTML, CSS and JavaScript
- We worked and built applications with technologies such as React.js, Node.js and SQL.
- Our applications were then implemented with databases such as MongoDB and Cloud Services such as Heroku for our servers.

• EXPERIENCE

Projects

I used this time to make a multitude of projects under my belt as my creativity was flowing more each time we learn more about the endless possibilities that can be done with JavaScript and its various Frameworks

PopCorn Time | Position: Front-End | Participants: 4

This program was the first project we made and I gave the idea of it being a movie style application similar to IMDb but it was different in the way it was formed it was to be projected onto a cinema screen when movies were searched. One of the notable achievements I received was based on my creativity and quick thinking so we werent stuck on a section of the project and waste time.

Budget Tracker | Position: Front and Back | Participants 1

This application was made for usage of will be able to provide transactions and deposits A user will then be able to put the name of Whatever your transaction you would like and then be able to put the value of the said transaction. Due to Heroku recent policy changes it cant be hosted on its servers but can still be accessed if on a local computer.

(These projects can also be viewed in my portfolio)

Fulfillment Associate at Target, Miami

April 2021 — August 2021

As part of the fulfillment department, I was tasked to retrieve orders that customers buy beforehand and have them ready as they got to the store under a certain amount of time.

- While my time working I was awarded with the fastest time for the month twice and overall raised the average of the team.
